JONNAGADLA SHIVA KUMAR

Solution Architect | Cloud and Platform Architecture

Älmhult, Sweden · +46 721 300 149 · shivatsastra@gmail.com · linkedin.com/in/shiva-kumar-j-271551121 · shivakumarjonnagadla.github.io

PROFESSIONAL SUMMARY

Solution Architect with 15+ years in enterprise IT, designing and delivering global, cloud-native platforms on Google Cloud where more than 80% of the data arrives through integrations. Partners with product owners to shape requirements into designs, leads cross-team data and schema agreements, and sets the architecture patterns and roadmaps that other teams build against.

Remains hands-on: owns 20+ Java Spring Boot microservices and the middleware behind the front end, writes and merges production code daily, and keeps architectural decisions grounded in the real codebase. Deep in Java, event-driven design on Kafka, PostgreSQL and cloud-native platforms, with a strong command of security, performance and resilience. Google Cloud Certified Professional Cloud Architect. Works AI-native with Claude Code and MCP tooling, and is known for modernising platforms and driving measurable cost reduction.

CORE COMPETENCIES

- Solution and enterprise architecture
- Cloud-native design on GCP (GKE, Anthos)
- Event-driven design (Kafka, Pub/Sub)
- Microservices and SOA
- Reference architectures, ADRs and roadmaps
- Data integration, schema and data contracts
- Security and identity (OAuth2, OIDC, RBAC)
- Performance, scalability and resilience
- Observability and root-cause analysis
- Infrastructure as code (Terraform, Helm)
- Code review and quality gates
- AI-augmented engineering and MCP
- Platform modernisation and cost optimisation
- Stakeholder management and mentoring

PROFESSIONAL EXPERIENCE

Solution Architect

August 2022 to Present

Inter IKEA Digital, Älmhult, Sweden

- Architect a global, cloud-native GCP platform where more than 80% of the data arrives through integrations. Lead the technical direction while staying hands-on.
- Gather and shape requirements with product owners and turn them into designs, architecture and engineering work the teams can build against.
- Lead cross-team data-integration discussions: schema reviews and data-sharing agreements with system owners that deliver clean, reliable data.
- Build and own 20+ Java Spring Boot microservices and the middleware behind the front end: REST (OpenAPI 3.0), Spring Security, JPA and Hibernate, with Kafka and Pub/Sub messaging.
- Design event-driven architecture with dead-letter routing, idempotent consumers and produced-versus-consumed monitoring.
- Restructured a 130GB PostgreSQL table with list partitioning and a keyset-pagination backfill, with zero downtime. Designed Elasticsearch and Gemini AI search and aggregation.
- Led the OpenShift to GCP Orbit (Anthos) migration across 11 clusters and 6 projects in EU, US and Asia, and the Akamai to Cloudflare migration across 10 domains, both with zero downtime and all infrastructure as code (Terraform, Helm, RBAC).
- Defined reference architectures, guardrails and golden paths. Built reusable ROI, observability and service-health dashboards (Grafana, Prometheus, Superset, Looker Studio) adopted by common teams.
- Created a unified model for pricing and range data, giving teams one governed source of truth.
- Hardened security with OAuth2, OIDC, JWT, RBAC, VPC Service Controls and Cloud Armor. Standardised monitoring after a silent data-loss incident, cutting time-to-detect from days to minutes.
- Write, review and merge production code daily, approve pull requests, and enforce SonarQube, CodeQL and contract-first API review. Built CI/CD in GitHub Actions and all infrastructure in Terraform.
- Drive modernisation: Spring Boot 2.5 to 3.3 migration and AI-native engineering with Claude Code, Copilot, Vertex AI and MCP servers embedded in the developer framework.
- Deliver cost optimisation through architecture: an in-house QR service at 100x lower cost than the licensed tool, serverless right-sizing, and a rendering pipeline saving 3,000+ labour hours per store every year.
- Mentor engineers, run design reviews, write ADRs and onboarding material, and represent the platform in cross-team technical forums.

Senior Software Engineer

December 2019 to July 2022

Tata Consultancy Services, Älmhult, Sweden

- Designed and built core modules of a mission-critical IKEA enterprise system in Java and Spring Boot, lifting reliability and throughput.
- Developed REST APIs and backend services from design to production with unit and integration tests. Built system integrations with careful data mapping, transformation and error handling.
- Resolved complex production issues hands-on and mentored junior engineers through code reviews.

Technical Lead

April 2017 to November 2019

Tata Consultancy Services, Älmhult, Sweden

- Led an in-house and offshore development team through the full delivery lifecycle, owning code quality and delivery while staying hands-on.
- Set coding standards and the technical approach, ran design and code reviews, and acted as primary client technical contact. Managed Control-M batch scheduling to protect downstream SLAs.

Senior Developer

June 2014 to March 2017

Tata Consultancy Services, Chennai, India

- Delivered enhancement projects across system integrations, process streamlining and data lineage. Led code reviews and mentored developers.

Developer

June 2011 to May 2014

Tata Consultancy Services, Chennai, India

- Built product features with Java, Informix 4GL, PL/SQL, Oracle and shell scripting on Unix. Resolved production incidents within SLA.

TECHNICAL SKILLS

Languages: Java 17 / 21, SQL, PL/SQL, Python, Bash, JavaScript, TypeScript (familiar)

Backend and APIs: Spring Boot, Spring Security, Spring Data, JPA / Hibernate, REST, SOAP, OpenAPI 3.0, Microservices, Helidon

Events and messaging: Apache Kafka, Confluent, Google Pub/Sub, event-driven design, dead-letter routing, idempotent consumers

Cloud and platform: Google Cloud (GKE, Anthos, Cloud Run, Cloud SQL, BigQuery), Kubernetes, Docker, Helm, Terraform, OpenShift; Azure and AWS (transferable)

Data: PostgreSQL, Oracle 19c, Redis, Elasticsearch, BigQuery, Neo4j, MySQL, partitioning, query tuning

Security and edge: OAuth2 / OIDC, JWT, RBAC, VPC Service Controls, Cloud Armor, Cloudflare, Akamai, PCI-DSS and GDPR awareness

Observability: Grafana, Prometheus, OpenTelemetry, JMeter, Superset, Looker Studio, root-cause analysis

Quality and delivery: GitHub Actions, Jenkins, SonarQube, CodeQL, JUnit, TDD, contract-first review, SAFe and Scrum

AI-native: Claude Code, GitHub Copilot, Vertex AI, Gemini, MCP servers, React (working level)

CERTIFICATIONS

- Google Cloud Certified Professional Cloud Architect (2026, valid through 2028)
- Oracle Database Certified Professional (DBA)
- Neo4j Certified Professional (Graph Database and Cypher)

EDUCATION

Bachelor of Technology in Information Technology, SASTRA University, Thanjavur, India. 2011, GPA 8.8 / 10.
